Five StarsBy MatyGreat book, refer to it often in my MLIS program. Cheers!6 of 6 people found the following review helpful. How students do their researchBy Jillian RCarol Kuhlthau, in her book, 'Seeking Meaning-a process approach to library and information services', describes clearly her theory about the methods students use when they research a topic.The book, covers step by step, the development of her study and the methods she used to validate her theory.She details the stages of the search process, emphasizing that the stages are not necessarily linear. Students initially suffer anxiety when faced with an assignment.She claims that at this point of time they need to have an invitational mood which will enable them to cope with the new ideas as they jostle with their own personal world view. Some students then begin to form a focus.For students who find a focus, the search process becomes more directed.At this point the anxiety lessens.The search then moves into the closure phase.I would recommend this book to any librarian,teacher or student. The book not only clearly shows how research is conducted, it contains effective ways students can deal with each stage of the information process. It also describes, for librarians, ways they can help the different types of researchers, both professional and recreational, they are likely to meet in their libraries.

First published in 1993, this book presents a new process approach to library and information services.

"Kuhlthau's Seeking Meaning is a classic text that is recognized worldwide in library and information science. significant in the field of library and information science and especially for our understanding of user information seeking behavior." - Library Information Science Research"[L]ibrary and information science departments should adopt Seeking Meaning (2nd edition) as a textbook for educating a new generation of reference librarians. Experienced reference librarians should read it for their professional development. Owners of the first edition should consider purchasing the second for its expanded elaboration of the information search model. Librarians who teach bibliographic instruction and/or research methods should incorporate its findings into their curriculum." - The Australian Library Journal"If anything the Information Search Process [ISP] model is gaining more currency, making this second edition a timely updating. . . . It is certain that the second edition is replacing the first edition on the shelves of universities and colleges. For the practitioner who may have missed Seeking Meaning the first time round, it is not the intimidating read you might expect. Clearly written, well crafted and, given the nature of the book, free for the most part of jargon." - The Electronic LibraryAbout the AuthorCAROL COLLIER KUHLTHAU has been on the faculty of school of communication, information, and library studies, Rutgers, the State University of New Jersey, since 1985. She has served as chair of the department and director of the Library and Information Science Master's Degree Program. She has had many awards including the American Library Association Jesse Shera Award for Outstanding Research, the Lazerow Distinguished Lectureship, Department of Library and Information Science, University of California, 1995, the Educational Media Association of New Jersey President's Award, 1997, and the American Association of School Librarians Distinguished Service Award, 2000. Her publications include many books, including the highly regarded first edition of the current book and numerous research articles.
