**Brian Skyrms : Social Dynamics** before purchasing it in order to gage whether or not it would be worth my time, and all praised Social Dynamics:

Brian Skyrms presents eighteen essays which apply adaptive dynamics (of cultural evolution and individual learning)

to social theory. Altruism, spite, fairness, trust, division of labor, and signaling are treated from this perspective. Correlation is seen to be of fundamental importance. Interactions with neighbors in space, on static networks, and on co-evolving dynamics networks are investigated. Spontaneous emergence of social structure and of signaling systems are examined in the context of learning dynamics.

"Social Dynamics offers a careful, informed exploration of the relevant ones, as well as discussions of their explanatory import. No one interested in the evolution of sociality should ignore it, if only to know what it takes to carry out a thorough evolutionary investigation." --Notre Dame Philosophical s Online About the Author Brian Skyrms is Distinguished Professor of Logic and Philosophy of Science and Economics at the University of California, Irvine. His interests cover a range of topics, including the evolution of conventions, the social contract, inductive logic, decision theory, rational deliberation, the metaphysics of logical atomism, causality, and truth. He is the author of Signals: Evolution, Learning, and Information (OUP, 2010) and From Zeno to Arbitrage: Essays on Quantity, Coherence, and Induction (OUP, 2012).
