Shawn Konecni, Cory McClinton : SOS GARDENING: Prepping Your Survival Garden for Disasters before purchasing it in order to gage whether or not it would be worth my time, and all praised SOS GARDENING: Prepping Your Survival Garden for Disasters:

0 of 0 people found the following review helpful. One of the greatest survival bookBy CustomerOne of the greatest survival book. If your are planning to grow food before and after an apocalyptic scenario, this is your book. It explains

survival gardening principles not found in any other sources. Like how will you grow your crops after radioactive fallout or how to protect your crops from Hurricanes, and other extreme weather or manmade disasters. I really advise this book. 0 of 0 people found the following review helpful. Three Stars By Eli There was a lot of repeat info in book. 0 of 0 people found the following review helpful. Four Stars By faisal H. Food for thought...

Covers toxic chemicals, pest control, biological hazards, radioactive fallout, looting, vandalism, floods, drought, soil erosion, wind, damaging precipitation, extreme cold, volcanic ash, wildfires, and more! Food is one resource that many of us take for granted. Unfortunately, as modern society evolves, we face a number of potential threats to our food supply, making reliable access to food anything but guaranteed. Over the years, we have developed a false sense of security. To be truly prepared for any disaster in an uncertain future, we must be able to grow our own food. However, it is not enough to simply grow a garden for self-sufficiency while under peaceful conditions. Any garden utilized for food production must also be resilient to challenges we face in times of crisis. Whether you refer to yourself as a prepper, survivalist, gardener, or homesteader, this book will enable you to achieve the following: Protect your garden from natural hazards such as flooding, inclement weather, soil erosion, wildfires, infestations, and others Mitigate chemical, biological, and radiological hazards such as toxic industrial chemicals, infectious diseases, and radioactive fallout Protect your survival garden from looting and vandalism with special tactics to avoid detection and recognition Increase the survivability of your garden and your family using best practices that combine traditional gardening with disaster preparation Develop and implement countermeasures that are effective for your own unique situation The new approach presented in this book will enhance your thought process and mindset for survival. Cory McClinton is a decorated combat medic, former ANGLICO Marine, and a certified physician assistant. Cory has been studying wilderness survival since a young age and has a special interest in wild edible and medicinal plants. Having grown up in southern Louisiana, Cory has first-hand experience with major disasters and understands that sustainable food and water is paramount during any crisis situation. Shawn Konecni holds a doctorate in biomedical engineering as well as academic degrees in microbiology, computer science, and business administration. With his unique background, he has worked as a research scientist, technology manager, university instructor, and entrepreneur. Shawn utilizes his extensive knowledge and experience to help readers find new ways to approach existing problems and think outside the box.
